PROFESSIONAL SUMMARY

Full stack developer with 5.5 years of experience, combining a strong UI/UX foundation with over two years of full stack development at Oracle. Focused on enterprise application performance, API development, real-time workflows, and AI-assisted modernization.

PROFESSIONAL EXPERIENCE

Oracle India Pvt Ltd
Software Developer (IC2)

Jun 2024 - Present

Project: Oracle Aconex — Distribution Matrix and Document Process Configuration.

Oracle Aconex — Distribution Matrix

Enterprise document review application that enables project teams to define review rules, assign process owners and reviewers, and initiate document workflows. Supports configurable review stages, participant management, bulk operations, Excel import/export, and real-time change notifications. My contributions span frontend performance, API development, grid virtualization, SSE integration, and application reliability.

Technologies: TypeScript, Preact, Oracle JET, RAPID, Java, Helidon, REST APIs, SSE, Docker.

Oracle Aconex — Document Process Configuration

Configuration module for creating and maintaining reusable document review templates, sequential and parallel review stages, review outcomes, and document status mappings. Contributed to UI enhancements, reusable review-flow components, validation, framework upgrades, build optimization, and security remediation.

Technologies: TypeScript, Preact, Oracle JET, RAPID, Java, Spring Boot, REST APIs, Docker.

Distribution Matrix — Nitro/Redwood Modernization

Ongoing modernization of the Distribution Matrix UI from RAPID/Preact to React-based Nitro/Redwood using AI-assisted development. The migration introduces reusable components, virtualized grids, and typed API integrations while preserving existing review workflows and business rules, supported by automated regression checks.

Technologies: React, TypeScript, Nitro/Redwood, TanStack Router, Vite, Bun, AI-assisted development.

- Improved large-grid responsiveness through row and column virtualization, progressive loading, and viewport-based rendering.
- Optimized screen loading using concurrent API calls, reusable hooks, and lightweight endpoints that avoid fetching complete matrix payloads.
- Implemented end-to-end SSE notifications with cross-pod delivery, heartbeat monitoring, and automatic reconnection.
- Developed Excel import/export workflows with validation, bulk updates, and failed-record reporting.
- Strengthened backend error handling for authorization failures, database errors, and concurrent update conflicts.
- Optimized UI bundles and asset loading through Webpack code splitting, source-map analysis, and caching.
- Streamlined build pipelines through caching, consolidated steps, and reduced artifact transfers.
- Remediated dependency and container vulnerabilities identified by OWASP Dependency-Check, Fortify, Trivy, and SLAPS.
- Modernizing RAPID/Preact interfaces to React-based Nitro/Redwood using AI-assisted development, reusable components, and regression testing.

Technical skills :

- Languages: JavaScript, TypeScript, Java, HTML5, CSS3.

- Frontend: React, Preact, Oracle JET, RAPID, Nitro/Redwood, custom hooks, reusable components, UI/UX implementation, complex data grids, forms, REST integration.
- Backend: Helidon MicroProfile, Spring Boot, REST API development, targeted response design, validation, exception handling, authorization-aware responses.
- Performance: Grid virtualization, progressive loading, concurrent API orchestration, request batching, bundle analysis, code splitting, caching, build optimization.
- Real-time communication: Server-Sent Events, EventSource, cross-instance notifications, heartbeat monitoring, reconnection handling.
- Build and delivery: Git, CI/CD, Docker, Kubernetes, Maven, Webpack, Vite, Bun, npm, dependency and runtime upgrades.
- Security: OWASP Dependency-Check, Fortify, Trivy, SLAPS, vulnerability remediation, container hardening.
- Testing and quality: Jest, Cypress, Bun tests, browser automation, mock APIs, regression testing, linting.
- Applied AI-assisted, specification-driven development using Codex skills to analyze Jira requirements, retrieve related stories and past resolutions, and implement features or fixes in dedicated codex-<JIRA-ID> branches, preserving business context and requirement traceability.

Professional Achievements

- Excellence Award: Received Director-level recognition for "dedication and commitment" in overcoming complex deployment challenges to improve product delivery speeds.

Société Générale Global Solution Center Pvt Ltd Software Engineer

Jan 2023 - Jun 2024

TOP / TPS is a middle office application where trade data is merged along with reporting, product, regulatory, accounting, etc information and sent to regulatory bodies across the globe. Application is a golden source holding historical data of 15+ years(Oracle 19C database), which it makes suitable for data analysis. Data is transformed and sent downstream in different methods like snapshots, direct DB push, and CSV extracts using Autosys, NIFI tool, etc.

Monitoring Dashboard

- Developed a monitoring dashboard for end-to-end support Monitoring using HTML/CSS, and React JS. Which continuously checks the health of servers/services (Processes uptime, CPU / Memory usage, DataBase connectivities, Storage), Daily / Monthly batch completion status, Input / Output file delivery status, and Continuity of incoming messages from the TIBCO queue.

Web Application

- Developed the web application that displays reports in chart forms using React high-charts.
- Contributed in data360 web application where users across company can check the status of trades (listed, etc, Positions) directly based on user profiles.

Ekaggata Technologies Pvt Ltd Senior Software Engineer

Apr 2022 - Jan 2023

- Worked for Société Générale, on TPS / TOP Applications.

Getmyuni Education Services Private Limited Junior Web designer

Apr 2021 - Mar 2022

- Designed UI for a multi-platform community focused on details about college admission, competitive exams, trending courses, top scholarships and more using Figma, Zeplin and Adobe Illustrator.
- Collaborate with developers to maintain design consistency and coherence across features on the other 3 business products. (GetMyUni, IeltsMaterial & GetGis)
- Developed landing pages using HTML, CSS and JavaScript.
- Received "Best Performer Award" at GetMyUni (Oct 2021) for consistently exceeding performance [Link](#).

EDUCATION

Sree Vidyanikethan Engineering College
Bachelor of Technology (EEE) - 7.33 CGPA

2014 - 2018

Sri Chaithanya Junior College
Intermediate - 95.2%

2012 - 2014

Himaja English Medium High School
SSC - 9.2 CGPA

2012

PERSONAL PROJECTS

Simon Game

[Give it a try here by clicking 🖱️](#)

A simple 4-color memory game using JavaScript is a classic and engaging cognitive activity that challenges players to test and improve their memory skills. The primary goal of the game is to remember and reproduce a sequence of colors in the correct order.

Amigo Dental Clinic

[Give it a try here by clicking 🖱️](#)

Designed a user-friendly interface, and dental clinic website with appointment booking system using HTML, bootstrap, CSS, and JavaScript. Delivered a functional and intuitive website, enhancing the clinic's online presence and patient experience.

Keeper App

[Give it a try here by clicking 🖱️](#)

A simple notes app a clone of Keep Notes using ReactJS, allowing users to create, edit, and delete notes. Utilizes state management for real-time updates and a clean design for usability.
